Using Workspaces and Collaboration

Ned Bellavance FOUNDER, NED IN THE CLOUD LLC @ned1313 www.nedinthecloud.com

Overview

Using workspaces for environments

Collaborating with remote state

Use remote state as a data source

Globomantics Environment

Work with the larger team

Create infrastructure for other teams

Enable collaboration through remote state

Restrict access for other teams

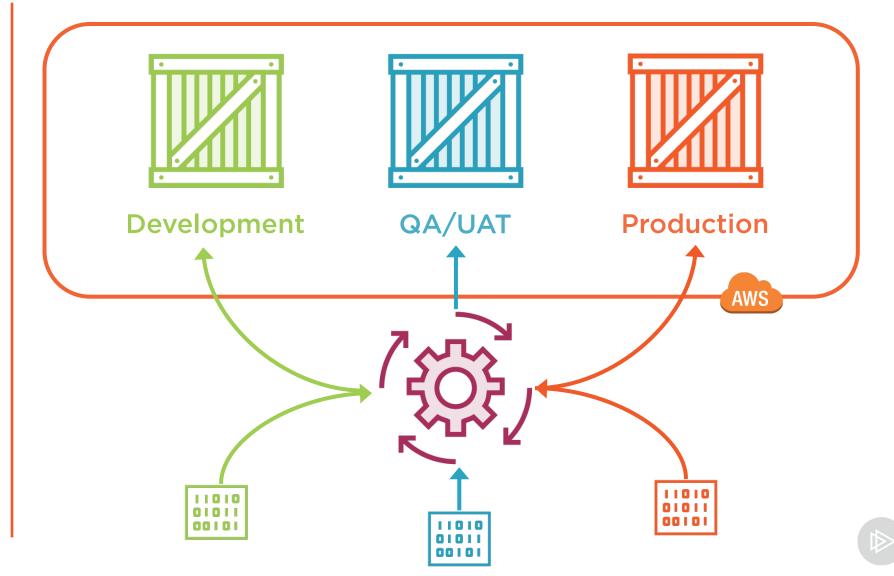

Current Environment

10.0.0.0/24 10.0.1.0/24 10.0.2.0/24 public public public 10.0.10.0/24 10.0.11.0/24 10.0.12.0/24 private private private us-east-1b us-east-1c us-east-1a

VPC - 10.0.0.0/16

Multiple Environments

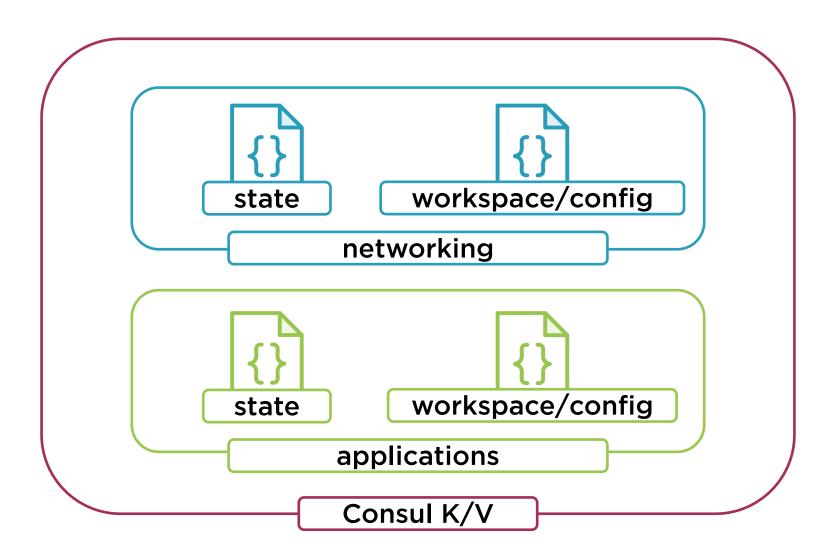

Terraform Workspaces

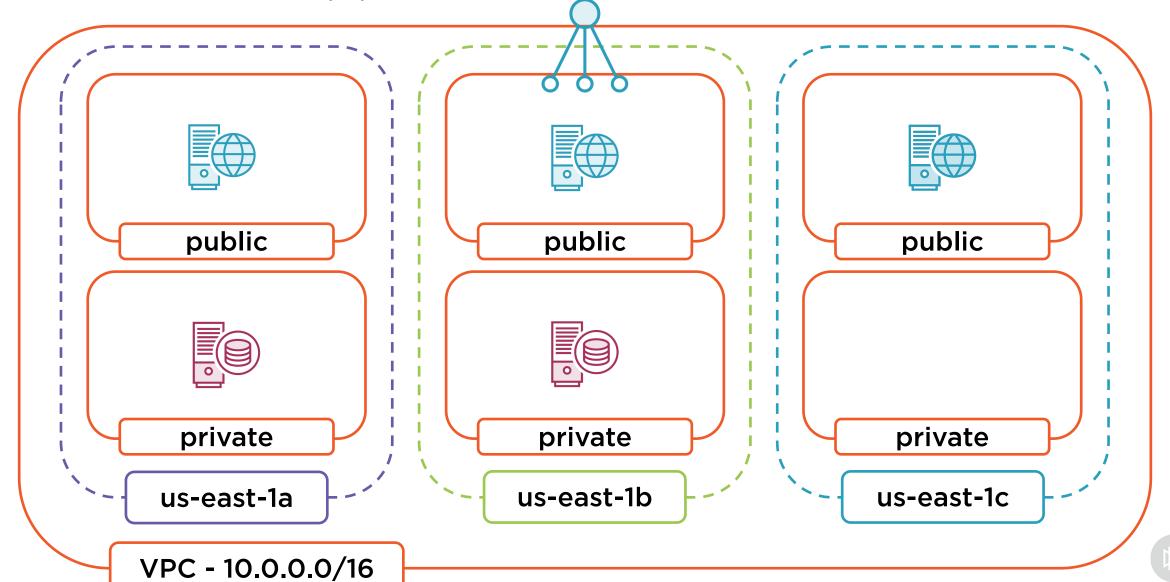

Common configuration
Individual state data instance
Multiple environments
terraform.workspace

Consul Setup

Application Environment

State as Data Source

```
data "terraform_remote_state" "networking" {
 backend = "consul"
 config = {
  path = var.network path
  address = var.consul address
  scheme = var.consul scheme
```

Summary

Workspaces for environments

Remote state for collaboration
